SUMMARY

Researcher with 2+ years at Harvard Business School specializing in applied ML, large-scale data analysis, and human-centered AI. Background in CS and Psychology with hands-on experience in explainable AI systems, large datasets, and user-centered evaluation — focused on the intersection of technical AI development and responsible deployment.

EDUCATION

Williams College

Williamstown, MA | Jun 2024

BACHELOR OF ARTS, MAJOR IN HONORS COMPUTER SCIENCE & PSYCHOLOGY

SKILLS

Languages:	C, F#, Java, Matlab, Python, R, SQL, Stata, $\LaTeX$
ML / Data:	PyTorch, TensorFlow, scikit-learn, Pandas, Hugging Face, Jupyter, NumPy, SHAP, LIME
Cloud & Infra:	AWS / GCP / Azure, Docker, Git, Bash, Unix OS
Research:	Systematic literature review, User Study Design, Mechanical Turk
Courses:	AISST Technical AI Safety Fellowship, BlueDot AGI Strategy

WORK EXPERIENCE

HARVARD BUSINESS SCHOOL | PREDOCTORAL RESEARCH ASSOCIATE Boston | Jul 2024 – Jul 2026

- Cleaned and modeled 100M+ row datasets, including but not limited to, restricted-use U.S. Census Bureau datasets holding Special Sworn Status (SSS), L2 Voter datasets, and WRDS datasets.
- Contributed to 2–3 research projects with HBS faculty, including running statistical models, refactoring codebases, and editing sections of papers submitted for publication
- Reduced data pipeline runtime through codebase refactoring, enabling faster iteration across multiple concurrent research projects
- Contributed to research with implications for democratizations, labor markets, and voter policies.

WORLDCARE INT. | DATA ANALYSIS/AI RESEARCH INTERN

Boston | Dec 2022 – Feb 2023

- Cleaned and analyzed confidential healthcare datasets using Python and Tableau; surfaced findings presented directly to company CEO & COO
- Assessed risks and limitations of AI tools for healthcare integration, producing a vendor recommendation framework used by executive leadership
- Developed technical writing documentation for non-technical audiences on AI tool usage and limitations

WILLIAMS COLLEGE | COMPUTER SCIENCE & PSYCHOLOGY TA

Williamstown | Aug 2022 – May 2024

- Held weekly office hours for 1-on-1 support on 100-level Psych classes and 100- & 300-level CS classes

PROJECTS

EXPLAINABLE AI FOR TINYML SYSTEMS

Undergraduate Thesis

- Designed and implemented SHAP- and LIME-based post-hoc explainability methods for TinyML models deployed on resource-constrained devices
- Conducted user studies to evaluate interpretability of model explanations for novice users, synthesizing findings across a year-long research program
- Contributed to growing literature on human-centered XAI, bridging the gap between ML engineers and end users
